Shaving Cream Marble Painting

Materials Required:

- Shave foam (any type of shaving cream that's released in foam)
- Liquified watercolor (3 colors for this project)
- Toothpicks
- A plate (any flat surface to apply the shaving cream)
- A cardboard sheet, and a sheet of cardstock paper

Instructions:

1. On a plate, begin by applying a good layer of foam shaving cream. Don't be afraid to cover the whole plate.
2. Pour the liquid watercolor on top of the layer of shaving cream. When doing this step, try to distribute the colors into as much negative space as possible for a more full piece at the end.
3. Once the colors are on the shaving cream, trace on the painted layer of shaving cream with a toothpick or any thin object with a fine tip to create swirly patterns (ex: fork or a skewer).
4. As the paint and swirling process is complete, apply a sheet of cardstock paper on top of the plate that is filled with the painted shaving cream and press down lightly.
5. Peel the sheet of paper off and use the cardboard sheet to peel the layer of shaving cream off the paper to get rid of the excess. Now you have a marble painting!
